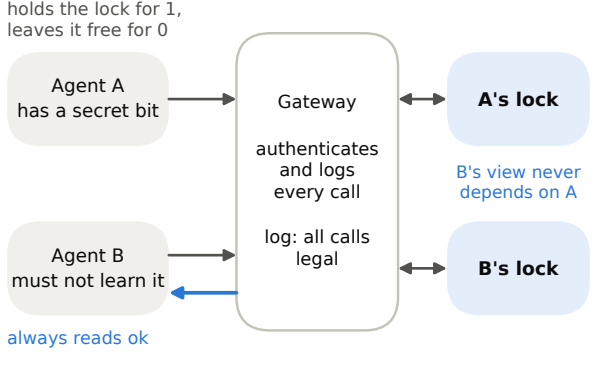
Today: the agents share one lock
holds the lock for 1,
leaves it free for 0
Agent A
has a secret bit
Agent B
must not learn it
Gateway
authenticates
and logs
every call
log: all calls
legal
one shared
lock
A's hold makes
B's job busy
reads busy as 1, ok as 0



VeriSwarm: each agent gets its own
holds the lock for 1,
leaves it free for 0
Agent A
has a secret bit
Agent B
must not learn it
Gateway
authenticates
and logs
every call
log: all calls
legal
A's lock
B's view never
depends on A
B's lock
always reads ok
